

PROJECT STATUS

Wedding Website Project Summary

Status update for Jo & Mike live version

Where We Are Now

- A live guest-facing wedding route now exists at /wedding with the Aegean Romance theme for Jo and Mike.
- The site content has been swapped over from the old John and Sarah demo to a Greece destination-wedding direction.
- The couple portal is active and includes checklist, RSVP dashboard, seating planner, and calendar sections.
- Checklist, RSVP, and calendar are now connected to the database and save real data.
- The existing database has been purged of sample rows and the automatic sample re-seeding has been removed.
- A clean new portal wedding shell will be created from the current Jo and Mike data rather than old test records.

Links To Use Locally

- Public wedding site: <http://localhost:3000/wedding?theme=aegean-romance>
- Couple portal: <http://localhost:3000/couple-portal?theme=aegean-romance>
- Portal login:
<http://localhost:3000/portal-login?next=%2Fcouple-portal%3Ftheme%3Daegean-romance>
- Portal password: john-sarah-portal

What Still Needs Doing Next

- Replace any placeholder factual details in weddingData.json with Jo and Mike's real confirmed date, venue, travel, and contact details.
- Restart the dev server if Prisma changes were made recently, so the latest client is definitely being used.
- Push the repo to GitHub.
- Create a Vercel project and add DATABASE_URL, OPENAI_API_KEY if needed, COUPLE_PORTAL_PASSWORD, and PORTAL_SESSION_SECRET.
- Deploy and test the public wedding page plus the couple portal on the Vercel link.
- If they are happy with it later, connect a custom domain; for now the Vercel URL is enough to share.

Recommendation For Tomorrow

- Use the guest-facing /wedding route for sharing, not /templates, because /templates is still the style-browser experience.
- Treat the live version as a polished first client delivery, then tighten any last details after they review it.
