

PRODUCT EXPLAINER

What We've Built

A simple explanation of the wedding website + portal product

What This Is

- This started as a reusable wedding website, but it has now grown into a wedding website plus planning portal.
- It is designed to be reused for different couples, with the look and content changed without rebuilding the whole system each time.
- The value is not just the website itself, but the combination of beautiful design, guest information, and planning tools behind the scenes.

What's Already Built

- A polished public wedding website with multiple visual styles and themes.
- A private couple portal for planning.
- An RSVP dashboard for tracking guest replies.
- A wedding checklist for tasks and notes.
- A seating-planning area.
- A calendar / roadmap planning feature.
- An optional AI concierge for guest questions.
- A real database underneath it, so the portal is backed by live data rather than just being a static mockup.

Why It's More Than A Website

- It is no longer just a page with wedding details on it.
- It is moving toward a product where the couple has a guest-facing site and their own private planning space.
- That means it can be sold as a service, not just as a one-off page design.

What Happens Next

- Replace all remaining placeholder wedding details with the real couple's confirmed information.
- Deploy the project to Vercel so it has a live shareable link.
- Test the public site and the couple portal on that live link.
- Keep refining the portal interface based on how real couples use it.
- Decide which features belong in each package.

How It Could Be Sold

- Basic: a beautiful wedding website with the key guest information.
- Mid-tier: the website plus the AI guest assistant.
- Premium: the website plus the private planning portal with RSVP, checklist, seating, and calendar tools.

The Core Message

- This is not just a wedding website anymore.
- It is the beginning of a sellable digital wedding service: website in front, planning portal behind, and reusable structure underneath.
